Polycart Medical provides solutions for creating a bacteria-free environment.

Polycart has developed a novel antibacterial plastic sheet, POLYAB PL0211, which prevents the development of bacteria and micro-organisms on the surface.

Many types of bacteria have become immune to the disinfection methods performed regularly in the patient's environment. POLYAB PL0211 is used in the production of components of various designs and sizes for use in the patient's surroundings.

**POLYAB PL0211** prevents the development of E-Coli bacteria.

**POLYAB PL0211** prevents the development of MRSA bacteria.
